

**IN THE SPECIFICATION:**

Please amend Page 3 and 4, to read as follows:

In response to the abovementioned object and effects from the object which are disclosed hereinafter, the present invention is described as follows. First of all, the present invention is a navigation device, ~~method, and program~~ which displays a present location, searches for and guides on a route to a destination, on the basis of a prepared road map and data of facilities, the device, ~~method, and program~~ comprising searching and outputting means for searching for and outputting a predetermined number of facility information items of a desired type of element facility included in facilities existing ahead on an expressway, when the present location is on an expressway, from the data in accordance with a predetermined operation performed, and, a searching and outputting means is configured to simultaneously output at least two or more of the facilities including facility information of at least any two or more element facilities.

According to the present invention, if the present location is on the expressway, a predetermined simple operation by pressing an information key or the like allows to search a predetermined number, that is, two or three facility information items of a predetermined type of element facility such as a gas station or restaurant in a service area (SA) or parking area (PA), which exists ahead in the traveling direction on the expressway, in the order of nearest to furthest from the present location, and to output the searched information items by means of the display on the screen and speech synthesis. Accordingly, the information on the desired type of element facility existing on the expressway can be output with simple operation.
